## **CryptoSticky Pro (formerly YellowMemo) Crack [Win/Mac]**

CryptoSticky is a Software application, designed especially to organize and keep track of various daily tasks. The main features include the ability to: Encrypt any data stored in the application (and with the help of the built in password manager), make it safe from unauthorized access. Keep track of voice memos on a per

---

sticky basis. The ability to generate password protected 'stickies' from documents. How does it work

CryptoSticky operates in an entirely different manner to a normal sticky note. You create your sticky. You then insert the note into your sticky. You are then prompted to insert the following information: Encryption Password (For each sticky) You then have access to all the contents of your sticky; Sticky Notes (to place in your sticky) Sticky notes must be placed in their own sticky. When you click on the Encryption Password box, a popup window will appear (as below). The window contains the following text: Remember to make a backup of this document, before using the software. It is not allowed to add 'stickies' or text to the existing sticky before encrypting it. The 'backup' button next to the Encryption Password field takes you to the application's Options menu (as below). Hint: In order to find the Restore option: Open the CryptoSticky Pro Options menu. The Backup button opens the Options menu, as shown below. Select Restore Select the location where you would like to restore your backup (as shown below). If you select a location from the "restore to" drop down, the app will now ask you to select the location of your backup, if you don't do that, it will still backup up, but to the default destination. A backup is always the same size, regardless of the size of the original file. Once restored, the folder you originally restored to is now the default destination for future backups. When you save your file you will get a warning that this is a backup and that it needs to be restored to it's default. If you accept, you will then have access to the file you saved in a previous backup. A Backup is a very important, back it up as often as you need to. It is very easy to accidentally lose/forget your 6a5afdab4c

## CryptoSticky Pro (formerly YellowMemo) Crack

CryptoSticky is a simple to use application that allows you to write down everything, and more. Used to help organize all the things in your life. If you had to take notes while in class, in meetings, or while surfing the web, CryptoSticky can help you to write down what you'd like to remember. Not only that, you can create various types of sticky. You can create sticky notes, Post-It Notes, or double sticky notes. You can also create sub-stickies. These can be anywhere from a simple sentence, to a full explanation of an event. You can write down notes on napkins, sheets of paper, on your hand, if you want to. The possibilities are endless. You can also create a voice memo. With the voice memo capability, you can record a message that will be saved and played back to you (if you would like). This is perfect for when you are on the move. CryptoSticky can work on both PC and Mac. However, it is best to use the PC version for a few reasons. The PC version has a stronger encryption system. The PC version also has more features than the Mac version, such as the ability to create sticky notes in different sizes, sync sticky notes (i.e. put the same sticky on different computers), the ability to create multiple windows (you can open more than one window at a time), and the ability to create sticky notes on napkins (i.e. when you are not able to write on a paper). You can sync your stickies to the cloud. This is done with the mobile app called StickySync. As of version 10, the mobile app also comes with photo sharing to allow you to share digital photos with other people (or groups of people). Software Requirements: CryptoSticky Pro supports the following versions of Windows (XP, Vista, 7) and Mac OS X. Verdict: CryptoSticky is a utility that allows you to keep notes, make voice memos, and to organize your life. It is also an easy to use, robust application with a diverse feature list. CryptoSticky Pro (formerly YellowMemo) Website: Google Play: Category:

## What's New In CryptoSticky Pro (formerly YellowMemo)?

CryptoSticky is an easy to use application that helps you to organize. It is primarily meant for keeping your personal details secure. You can create Sticky to keep any types of information, whether it is passwords, your IM logs, logins, bank details, site usernames and passwords, etc. A Sticky is a small envelope or pocket that can be inserted at any place. It can hold one or more items and is usually kept in the pocket of your jacket or pants, but can be used just about anywhere. Sticky is a great invention to store anything convenient to your pockets. You can easily create sticky notes by adding memos, photos, text or drawings. Every sticky can be either public or private. Creating a new sticky is so easy. Just double click the icon on the desktop, you will see the popup dialog box with an empty sticky area on the top. Add any memo, photo, text or drawing by clicking on the My Sticky option. When you have finished, simply close the dialog box by clicking the Cross. A new sticky on your desktop is what you are looking for. Sticky is a wonderful medium to keep notes on site login details, username and passwords that are not easy to write down on paper. When you need to access the site, just open your Sticky and search for the login details. It is almost instantaneous. You can even password protect your Sticky. Just add a password in the Edit Memo menu. The password will be added at the end of the

---

sticky. Your Sticky will only be opened by you once the password is correct. Voice notes can be very useful to take notes and jot down notes. You can record voice notes on a per sticky basis. When you are finished recording, you can edit the contents. The sound editor is easy to use and can be used to remove unwanted portions from the recording. Features of CryptoSticky Pro 1.3.3: \* Encrypted voice memos \* Different storage options for Stickers and sticky notes \* AES encryption when converting files to \*.utf8 format \* Ability to use color codes to categorize Stickers and sticky notes \* User can create Sticky notes (Answers the voices of "Hey you) \* User
