The present invention relates to a screen stopper which is fitted to the outlet of a toilet flush tank to close the outlet. More particularly, the present invention relates to a screen stopper which is of limited height and width so as to be able to be mounted in the outlet of a toilet flush tank. In the early history of toilet construction, as in many other buildings, the toilet was built with a single, shuttered outlet fitting directly over the flush tank. The fixture was held in position by grouting between it and the bottom of the tank, and was typically formed of metal and allowed the free passage of water into the tank. When the tank became full, it was emptied by the installer by being manually tipped over, and the outlet was allowed to open. As more toilets were installed, the typical outlet openings were provided with wire or plastic mesh covers which were latched in place to prevent the opening of the outlet, and to allow only water to pass. When the toilet was to be flushed, the cover was opened, and the water from the tank passed through the outlet into the toilet bowl. Later, toilet manufacturers, recognizing the function of the screen cover, provided an attachment which included a metal or plastic plate with a U shaped mounting. The attachment was threaded into the tank's outlet, and permitted the flush tank to be tipped over as in the traditional, manually operated system. A related problem with the use of a single cover for the outlet was that, as the tank drained, the surface area of the tank exposed to the toilet bowl was gradually reduced, and the amount of water wasted during a flush could become a nuisance and even a hazard. Because of the size and shape of the outlet, the single cover was used for the flush tank, and the volume of water was reduced because of the size of the remaining cover. The volume of water remaining in the tank when the cover was in place was wasted as the tank's surface area became smaller due to the reduced size of the cover. Many attempts have been made to minimize the wasted water by reducing the volume of water passing through the outlet during a flush. One solution to the wasted water problem is to install an outlet fitting which allows two or more amounts of water to

A: As far as I understand it, the YouTube app for 3DS used to be able to access YouTube's HTML5 implementation of its website directly, without needing to authenticate with a 3DS system. This was most likely a pre-made YouTube app, rather than a 3DS-specific YouTube app. However, this stopped being the case when YouTube bought TubeMate, and is in the process of using that to enable its HTML5 implementation to work on 3DS. Since TubeMate wouldn't be included as an app on the eShop, you can expect that you won't be able to download this YouTube app, and you can't use it in other ways (for example, you can't use the Videos on 360 feature). Unfortunately, I can't find any information on when this is expected to be available, although it's probably unlikely to be available soon.

A: Since the release of the new Nintendo 3DS eShop a new YouTube app has been released. It's called YouTube. Support for the Nintendo 3DS is available in three languages: English, French and German. As this isn't available on the 3DS eShop yet, you can watch YouTube videos by clicking on the url bar, or you can import video files on your SD card and watch those. It also has the videos on 360 feature that automatically sends any video that you are watching to your Google account.

Mentions, Drives, and Other Social Networking

Mentions, Drives, and Other Social Networking: How They Impact Your Search Rankings Many people have said that the terms "mentions" and "diggs" have a powerful influence on your search ranking. The following article walks you through the process of understanding how social media can impact your search ranking. It also lists the techniques for measuring mentions, drives, and other social media.

Mentions How do mentions impact your search ranking? When someone mentions you, they are referring to you by name. Mentions are almost always good for your search ranking and will improve it. The number of mentions that is associated with

you is called your “mention buzz.” In order for mentions to be good for your search ranking, it is important for you to have a strategy for all of the mentions. If you do not, the mentions will diminish and your search rankings will start to decline
