A = Last Access Time This can be the last time a user logs on, processes a file or any other occurrence (e.g. last time a file was opened). This value is only available for Active Directory objects. C = Creation Time The time when the object was created in the directory. This is never available for files. W = Last Write Time This is the time the most recent change was made to the file (e.g. last time the file was opened) This is not available for files. The default is W=Last_Write. S = File Size This is the size of the file in bytes. This is only available for Active Directory objects. "{mm/dd/yyyy hh:mm:ss tt} / {mm/dd/yyyy hh:mm:ss tt}" This format displays the value of the three attributes as a string in the following format: mm/dd/yyyy hh:mm:ss tt e.g. 13/11/2007 2:29:53 PM / 13/11/2007 2:29:53 PM
Format Example: 01311007 1416402877 / 130511007 2129144778 Last_Write This is the time of the last change to the file. This can be used to determine when a file was last changed (e.g. last time the file was opened). This is the default value if no value is present. Date Type Examples: Last_Access, Last_Access, Last_Access, Date, Last_Access Last_Write, Last_Write, Last_Write, Date, Last_Write
"Name of the file to display date for" "Test file to test" "This is a test object" Usage Examples:
"Display the Last_Access and Date for Employee objects in the Active Directory." "Display the Last_Access and Last_Write time for files." "Display the last access time for the current object."
"Display the Date of the file to be created." "Display the Last_Access, Last_Write, Size and Last_Access for Employee objects in the Active Directory." In order to be able to use Date comparison, it is necessary to install a third party software. Download the latest version of DateExtender from [HERE](#). "Test" is the latest Windows application that permits you
