Keymacro editor is an opensource PC keyboard macro recorder application that allows users to record and play macros. The program can be used to record several macros at the same time and save them to separate files. Keymacro integrates into the

Windows interface and allows recording not only keyboard presses but also mouse actions, system events, and sound playback. Keymacro can be used with programs that support macros, such as Notepad++, Notepad, Chrome, Firefox, Internet Explorer, Wordpad and others. Features: Record macros in .bat, .com, .vbs and other scripts. Create as many macros as you want. Record mouse clicks, keyboard presses, system events, and sound playback. Play back the recorded macros. Save macros to files or into .bat, .com, .vbs and other scripts. Preview the recorded macros and edit them if needed. Evaluation and conclusion While Keymacro is not a full-fledged software utility, it lets you record keyboard macros in a very handy way.

The program's interface is clean and well-organized, and it's easy to use. It is a lightweight application with no startup wizard and no registration process. In fact, all you need to do to record macros is double-click the program icon on the desktop.

Keymacro is a good tool to record not only your keyboard keystrokes, but also mouse clicks, system events, and sound playback. However, the program doesn't support playback and doesn't provide detailed information about sound files. MIDI
