The 24-hour format can be set to be 12 hour format with AM or PM and can be used in a night mode 29. The 24-hour format can be set to be 12 hour format with AM

What's New in the Digital Spectrum Clock?

Introduction The Digital Spectrum Clock application was designed to be a digital clock that runs always on top of your screen and can be moved around and made small or large. It displays the time and the background of the clock changes colors based on the color spectrum relating to the time of day. It cycles a six hour period starting at the color red. The application was created to be a small size application, with 2 colors (white for midnight and black for noon) and 6 hour periods. The application changes the background of the clock to the time of day. The video demonstrates the application. The specs are included with the application Requirements It was created with the .Net Compact Framework, so it needs the .Net Compact Framework version 1.0. The application requires a minimum of 1.0, and will run on more recent versions, but it was tested with 3.5, 3.6 and 4.0. It was tested on Windows Mobile 6.5, Windows Mobile 6.1 and Windows Mobile 5.0. The application was not tested on Windows Mobile 3.x or earlier or Windows CE. The application was also tested on Windows Mobile 7.x and Windows 8.x. The application was tested on both Windows Mobile 6.1 and Windows 7.1. To test the application, I used a Pocket PC T440 and the Microsoft E6500 device, which is a Pocket PC with an integrated Windows Mobile 5.0 OS. The application was also tested on my Windows 8.1 desktop with a wireless link. The battery on the device is a 1.5V 9800mAh battery. **Reviews** The application has been reviewed on Windows Mobile Blog, PC World, and Pocket PC Solution. **License** The application is free to use. It is distributed as an XAP application. You can download the application to a device and run it without needing a license. If you wish to use the application for commercial or corporate purposes, you must purchase a license for the application. **Performance** The application has been tested and optimized to run on a 3.5" display and a Pocket PC device. It should run on other devices with the same operating system. The application has been tested on low end devices such as the Nokia E71, which has a 2.5" display and the E51, which has a 3.2" display. The application has been tested on low end devices and a high end device and in both scenarios it was fairly responsive. There were no significant problems on the high end device. The application runs full screen, but you can move the clock around the screen. You can customize the clock by changing the color, font and width of the clock to your preference. **Features** The application has been designed to be a small size application, with 2 colors (white for
