System Requirements For Database Studio:

As with all Fallout 1st Editions, To keep the game stable and running properly, it's recommended that you use a computer with a CPU and video card of a minimum of 1.8GHz, 1GB of RAM, and 512MB of video RAM. This allows the game to run smooth and can be upgraded as necessary. For this game we have split the PC and Mac versions into two separate downloads. The game can be played on many different graphics cards, up to and including the latest Nvidia and AMD series, but at times the performance will be less than optimal
