Tutorial Comments Add comment to What if I can't find the article topic you are looking for? Add comment to Add comment to Awesome Author Topic I would still like to see CAD apps for old PIC projects! (Read 17222 times) Very easy to use Nice & simple Good for beginners (I'd like to say that there are plenty of great tutorials, but sadly there's not one) What I don't like about it I liked its design but it didn't worked with the new uArduino so that made it less powerful From my experience I was able to use it for a month or so. Plus the price is expensive AutoCAD sucks in my opinion. Nice and simpleThe first version had a very simple interface, but even more simple after upgrading to version 2016.The first version had a very simple interface, but even more simple after upgrading to version 2016. Great for beginners Design was clear to understand, even though it wasnt my type of design Only one problem, the design format was CAD-like and you would need to change the format to turn the design into a PCB What I don't like about it No change into PCB The design was attached to my main PCB and didn't show anywhere on screen. Only could see it while viewing my main PCB The PCBs generation tool wasn't very precise Design was clear to understand, even though it wasnt my type of design Only one problem, the design format was CAD-like and you would need to change the format to turn the design into a PCB What I don't like about it No change into PCB The design was attached to my main PCB and didn't show anywhere on screen. Conventional magneto-optical recording media comprise a magnetic recording layer composed of a magnetic material and a transparent layer, which is called the overcoat layer, which is formed of a resin material and which covers the magnetic recording layer to protect the magnetic recording layer and to impart a corrosion resistance thereto. When information is recorded or reproduced, the recording layer is heated by a light spot of laser and the magnetization direction of the magnetic material constituting the recording layer is reversed by the heat. The optical rotation of a magneto-optical recording medium changes in proportion to the square of the magnetization vector. The magnetization direction of the recording layer can be reversed by reversing the magnetic field which is applied to the magneto-optical recording medium by a magnetic field generating device. Thus, by superposing the magnetic field on a modulated light spot, information can be written into the magnetic recording layer. To reproduce the information, a light spot of the readout light is applied to the magneto-optical recording medium and a change in the optical rotation caused by the magneto-optical effect is detected. Since the magneto-optical recording medium is generally assembled with a protective window in a cover member, the cover member is divided into a base member and a lid member, and the protective window is formed in the lid member to expose an end surface of the base member. In the prior art, the base member of the magneto-optical recording medium is integrally formed in one piece by injection molding of thermosetting resin
