(...) ... it's the turn of the Computers Troubleshooter. It's a simple tool that comes with a series of utilities that allows you to fix problems with your desktop PCs without bothering with third-party software. How to use the software It doesn't have a simple interface, but it doesn't require any knowledge. Instead, it's all about tools and wizards. The different categories allow you to choose and launch only the program you need. For instance, you can open the Troubleshooter from its dedicated shortcut or launch the program directly from your taskbar. The utility comes with a couple of utilities and wizards that allow you to manage your computer's performance and settings, access your registry, and fix hardware and software errors. Choose your favorite part The Program Settings utility can be launched from the Start menu, whereas the other utilities can be launched from the taskbar. The first step involves choosing the component you need to fix. For instance, if you have a system freeze, it means that Windows hasn't updated properly. You can choose to repair the system, or add/remove new programs. In this case, you should select Windows Update, and then click to the "Options" button. If you have a hardware problem, you can access and fix your PC's hardware through the Hardware Repair utility. It's located on the settings section. If the program crashes or hangs, you can switch to the Troubleshooting utility and, from there, use the "Enable Debugging" button to launch the necessary debuggers. If your PC has a hard disk issue, you can use the Disk Defrag utility to optimize the computer's file system. In case of a system error, you should use the Diagnostic Tools utility to fix the problem. And if the problem is a software one, you can use the File System Check utility to repair the damaged system files. Before proceeding any further, you should know that the software is a freeware and it doesn't require installation. The software is available at: Note: the tool has been updated on March 29, 2018 and is now fully compatible with Windows 10. ... it's the turn of the Computers Troubleshooter.
