Cons Browser search box. Review Source: Capterra Response from MacWidgetsByApp Date: April 16, 2017 Hello, Thank you for the feedback. I'm glad you like the widgets feature of myBoard Torrent Download. We believe in sharing the wealth of our knowledge with as many people as possible. MyBoard builds on the industry-leading Dashboard, a freeware app released in 2012 and originally created for Mac. With this in mind, we have decided to donate 1,000 of our own app's profits to the Food Recovery Project. Their goal is to "Educate, educate, educate" - teaching the farmers and processors of the world about the importance of waste reduction in their businesses. Full of bugs and needs improvement Ease-of-use Functionality Product Quality Customer Support Value for Money Ease-of-use Usability Functionality Functionality Product Quality Quality Value for Money Value Support I like the idea of widgets for windows but they have a lot of bugs and they aren't working well. Also the dashboard has way to much space for the widgets and it makes the dashboard very big. Review Source: Capterra Response from MacWidgetsByApp Date: October 28, 2018 Hello, Thank you for the feedback. I'm sorry you are experiencing problems with the widgets. It seems to be an issue we have had in the past. This is not something we have been able to fix. Hopefully there will be more updates and improvements that may help. We are always updating and improving myBoard. Hopefully, you can continue to benefit from these updates. Pros The widgets look nice. Cons MyBoard crashes all the time. ### What's New in the MyBoard?

The app is an extension of the Dashboard (Dashboard for Windows), a Mac OS X app. However, Windows users may find its UI to be a bit too confusing. It seems that they've used the same approach in regards to the dock and the program setup. The bottom of the program is occupied by the left panel, the middle by the application interface, and the right by the interface for configuring the tool. The interface does not offer many options, thus it is not very helpful for those users looking for more customization. The top menu can be used to customize most of the settings for the app, and is a bit similar to the settings for the Dashboard, including the panel opacity and the location for button placement. The interface offers all the basic features, allowing you to perform basic functions, such as selecting to show or hide widgets, creating the panel, and removing it. These features can be used independently or to create the main panel. User interface and app features The interface is visually appealing, since it is colorful and does not take up too much space on the screen. It has an air of simplicity, and its panel and main interface are rather small. There are only a few settings to configure, so you won't be overwhelmed with options to meddle with. The tool is easy to learn and use. It is simply a shortcut to the dashboard, and it can be started and stopped by pressing the left mouse button, or by pressing a keyboard shortcut. There are two main panels: the dashboard panel and the main panel. The dashboard panel can be hidden and re-created by clicking the button at the top right, while the main panel can be moved and resized by dragging its edges. Once the panel is in place, the following features are visible: On the left side of the screen, there are icons which can be used to quickly access dashboard settings, the main panel settings, and the option to show or hide the dashboard panel. The middle of the screen hosts the application interface. The interface can be moved, resized, and clipped at any point, since it is embedded in the application panel. It can be scaled, but it is resizable only by dragging its edges. On the right side of the screen, there is an option to move, resize and delete the application interface. The interface can be dragged to a location of the user's choice, or it can be located in the middle of the screen and the application can be scaled along with it. The interface can be resized and clipped using the keyboard shortcuts Alt+right arrow and Ctrl+alt+left arrow. These keyboard shortcuts can be activated by pressing Alt+7 and Alt+5, respectively. The bottom of the interface hosts a horizontal panel, which can be moved and resized using the edge of the window or the arrow keys on the keyboard. The bottom right of
