Recently I drafted a document that had only pixel graphics. Once I was complete, I exported it to PDF. Throughout the drafting process I kept the file in Photoshop. Because I didn't modify the original file after it was drafted in my document, I accidentally made the PSD file a JPEG file. In LR you can select the original file and generate a preview of the file before exporting it. This is very useful. In the case above, I was selecting the file and generating a preview on a separate window. The preview window showed the pixel graphics I had on the PDF when I closed the PDF window. If I had exported the file as a JPEG, when I opened the PDF file it wouldn't show me what was in the PSD file. I had to export the file as a TIFF and try again. I like the Smart Previews and would encourage users to experiment with them. I've found

with most images, the smart previews alternatives are very useful although they do add to the file size. In the case above, the GIF was able to put together a dummy preview faster than it could assemble the final file.

Lightroom is a light-weight, image organizing program with a library of sophisticated tools for creating, managing, and editing RAW (RAW files are not yet suitable to be edited with Photoshop, but Lightroom can still be used to create and manage RAW files). Express keys is equivalent to shortcuts for the most common functions, such as loading and special effects and making alternate (travel) shots. Both are great programs and I think that Adobe Lightroom is slightly better than Photoshop for simple picture editing. I tested Photoshop CS5, CS6, and CS7. When it came to updates, most of the features were added to Photoshop CS6. It has received some changes in 64-bit and Quick Mask.
