Playback of audio files offline requires a dedicated application which can read specific files you want to play. In case you're not really fond of the program you're using, there are various alternatives, depending on flexibility, and set of features you need. One example is TrayAmplayer Activation Code, and comes with a slim design which can blend in any environment. Visual design and file support The application shows up on the desktop as soon as it's launched in an incredibly compact window, so you might need to take a closer look. Unfortunately, it can't be moved from the place it shows up in, but not even minimized, with no taskbar, or tray icon so it doesn't constantly stand in your way. You can easily bring up the playlist to manage the collection of songs you wish to play. Multiple lists can be saved and easily launched later on from the side panel. Adding files can just as well be done through drag and drop, and you're able to enjoy audio files under formats like WAV, MP1, MP2, MP3, OGG, AIFF, MO3, IT, XM, S3M, MTM, MOD, UMX, CDA, WMA, and ASF. Playback controls and playlist options The main controls window is initially fitted with only a few buttons. However, you can pay a visit to the settings panel in order to configure what controls are visible, and arrange them in a specific order. There's also a visualizer with several preset styles which change on mouse click. Hovering the cursor over the control window displays a tooltip with info regarding the currently playing song. Playback can be set to random, with the possibility to also sort the list by title, artist, or album. You can skip through content and adjust volume, but dedicated sliders can prove quite the pain since they only occupy a pixel in thickness. In conclusion To sum it up, TrayAmplayer Activation Code is a slim, practical application you can use to enjoy all of your favorite songs. It could have used a few more controls over the size of the main window, but it's fitted with a decent range of features and file support to meet most demands. Related Posts Who is TheManOfBirds? This application displays data in a helpful way that will allow you to get the most out of your system. Once installed, the application will show an icon on your desktop which you can then click on to activate. With it, you can create a shortcut and move it to your favourites. It can be minimised to the tray so it doesn't take up too much space on your computer. Graphical layout A point to note is that the application only comes in one language. However, it's free and easy to change the language by clicking on the Edit button. The main window offers quite a few tools which can be opened by clicking on their respective buttons. In the left column of the window you have a chart that displays basic information. It shows you the amount of files available, how many of them are read, how many are read but not yet listened to, and how many are currently playing. Another section in the same menu offers a calendar and an IPTV guide. In the calendar, you have a list of upcoming events. You can simply scroll through it using the scroll bars on the right hand side. The IPTV guide can be turned on and off, and it will display information regarding the available channels. Files menu The files menu offers some simple functionality, but some of the options will be useful. It can be used to browse your music folder, as well as to add files to your playlists and audio files to your iPod library. You can save playlist by pressing Ctrl+D, and it allows you to add media from the IPTV guide. In the next release, our team will continue to expand the range of tasks you can perform, and we'll add features you have requested. We hope to have it ready by the end of the year! We are thinking about other projects for the future, and the beta version we have now is a good opportunity to tell you about them. In the near future, we're going to be releasing a desktop app for playing MP3 and WMA files. We already have it up on our Google Play store, so you can download and try it out. And for those of you who have a computer with a Windows operating system, you can download and try it out on the Windows Store now. Mozilla Firefox is the most commonly used web browser worldwide. Its simple and easy to use interface makes it one of the most useful and often used web browsers available in the market. Although it is free of
