Program that enables you to access to control keyboard macros on your PC. KEYMACRO is a very helpful application that helps you achieve some great benefits by allowing you to access and control key macros easily. It is a program that offers a very convenient user interface that allows you to store custom macros. It works like this: when you need to perform a common task on your PC, for example, executing a specific command or opening a specific file, you can program a macro that will allow you to perform it with a single keystroke. There are several steps to follow to use this application, as it is not straightforward: you need to set a keystroke to be used for this task, add a custom message, and record the macro. Once you are done, you can execute this macro whenever you need. The interface is easy to understand and allows you to configure the application so you can easily access to your macros. It features a small, minimalistic window, which allows you to place your macros on the main screen in order to be accessed by a single keystroke. When you need to access to your macros, simply press the assigned key and you will immediately be able to execute your custom macro. You can modify the value and the image of your macro.

XiSRC

XiSRC is a powerful audio format converter that can increase the sound quality of your audio files by converting their sample rate to more suitable values. It comes with a minimalistic user interface that encompasses straightforward functions. However, given that it aims to help advanced users, such as audio engineers, its functions might not be as accessible to novice PC users. Features: Multi-thread and single-thread sample rate conversion modes Drag and drop support Customizable values: sample rate, bit resolution, dithering, output format and compression level Cinepak, Xing, Vadim codecs supported Built-in AAF/AAC/M4A encoder A: The format of most audio is PCM (i.e. linear) and therefore DPCM is the best, or closest, quality format to use. There are two issues with Xing: Xing is designed for things like "converting" video (from one format to another, like from PNG to JPEG). It's not designed for "converting" audio, and while it can be used for it, it's very limiting. Xing does not have FFmpeg plugins for converting. The FFmpeg plugin for Xing has an extremely limited number of presets for audio formats that it can convert. When you want to convert audio, you should use a FFmpeg Plugin for the format you want to convert to. You can find these plugins here: You'll need to look for FFmpeg plugin for Xing here: If you are wondering why "it doesn't support encoders", it's because there is no native xing encoder. Xing is in the same data structure as Xiph's Vorbis and Speex codecs, so if you use an Xiph FFmpeg Plugin, you can use it to convert to those formats as well. FFmpeg (the ffmpeg-all.html plugins) do not support all FFmpeg plugins. FFmpeg does not support Xing plugins. You need to use FFmpeg's X11 (Graphical User Interface) to get around this, but it's still a pain in the butt. You
