The Creative Cloud is a major purchase for many, but many people find it doesn't provide the overall value they need. Canon and Nikon are omitting the Creative Cloud option from their higher-end cameras because it just doesn't provide the value they need. The flagship feature of the Creative Cloud is the ability to create, edit and manage your projects and assets in the cloud, from any location to any device. These are features that are similar to what the users of all of the Windows PCs were used to on the first release of Photoshop long ago - and at least for the most part, those features have been eliminated by the time of the stable release. This may not be a deal breaker, but many people find the ditching of features in many apps along with a general decline in the quality of the program a substantial turnoff. On the other hand, Adobe has been more than willing to support the older platform users and it is still the go-to solution of many. Mainly because the hardware cost (that is, buying a lot of computers) is less in comparison. A lightning-fast performance when browsing, swiping, and zooming. Lightroom Classic CC is much faster than Lightroom 6 on the Mac or Windows platforms. The delay is consistent when scrolling through folders and images. Unlike other Photo Management Applications, the speed does not slow when scrolling through huge numbers of images. It's better than any previous version of Lightroom that I've used. Given Lightroom Classic's very good performance, I can't understand why it has not been bringing in additional customers. Perhaps the marginal performance improvement is not exactly what it seems. Certainly the lack of speed will discourage some customers.

Launched in 1938, Photoshop is synonymous with computer graphics. It was the first professional desktop imaging program, and it has ultra-high recognition and adoption among graphic designers, photographers, and artists. According to Adobe, this new version is built for professionals and is designed to fit more seamlessly into creative workflows through the interactive work canvas. It offers support for editing on canvas, as well as on smaller screens like iPhone 7 Plus and Samsung's Galaxy Note 8. The new toolset takes inspiration from the people who use Photoshop, making it more collaborative and giving it more context. With Adobe Share

The new smart tools enhance the accuracy and quality of selections for users who frequently use selections within Photoshop. Additionally, the new enhancements in the browser-based version of Photoshop CC include a one-click Delete and Fill tool. With Photoshop CC, Adobe has reimagined how artists and designers are working from anywhere. Like its desktop version, Photoshop on the web is capable of working with the latest version of Photoshop Standard, Photoshop Elements, and Photoshop Extended. It can handle the latest versions of Photoshop Standard, Photoshop Elements, and Photoshop Extended, even if they are not installed on your computer. Photoshop on the web has always worked with the latest version of the software you have installed on your computer. The only thing that limits its use is the internet connection. Built-In Smart Objects - Use Smart Objects to turn your image into a container for your creative projects. You can use them to save, share and print your edits. The new Magic Objects feature gives you an easy way to place photos and other elements on a Smart Object layer with just a few clicks. With this release, we are introducing the new concept of an Image & Filters panel. It's a unified workspace that provides easy access to commonly used tools and filters across Photoshop, Photoshop Lightroom, and Photoshop for iPad. Here, we have placed the original Photoshop tools, such as the Clone Stamp, Levels, and History panels, and they are now all available from the same panel. Similarly, the Filters panel, which is found on the top panel, now provides filter access across all Photoshop applications. Each filter is represented as a standard icon in the panel so that the panel appears consistent across Photoshop and Lightroom. The new browser-based sharing functionality is a welcome addition, because it leaves the desktop application relatively untouched. Just as you can share online, you can share through the browser, which is easier than using the desktop app. The browser version also makes it easy to share a single image using social media, email, or other means, rather than the "Send to a Link" feature of the desktop application.
